▼ Objective

A four-year Software Engineering student at HCMUT with a strong foundation in **Data Pipelines** and **Big Data** technologies. Seeking a Data Engineer Intern/Junior position to contribute to scalable data solutions while fast-tracking my technical growth in a professional production environment.

▼ Education

2022 – 2027: **Bachelor of Computer Science**
Ho Chi Minh University of Technology (VNU HCM)
Major: Data Engineering and Big Data

▼ Project

11/2025 – Present

Scalable Customer Data Platform (CDP) • Github link: [thanhtan2210/Scalable-Customer-Data-Platform-CDP](#)

- **End-to-End Data Pipeline:** Built a production-ready platform to ingest, process, and analyze large-scale customer behavior data using PySpark and FastAPI.
- **Cross-Platform Architecture:** Developed a dynamic environment configuration (launcher.py) ensuring seamless operation across Windows, Linux, and MacOS.
- **Performance & Reliability:** Leveraged Apache Spark for distributed processing with Parquet columnar storage and integrated Pandera for strict schema validation.
- **CI/CD & DevOps:** Implemented automated testing and deployment pipelines using GitHub Actions and Docker for consistent containerized serving.
- **Tech Stack:** PySpark, FastAPI, Docker, GitHub Actions, Pandera, Parquet.

10/2025–02/2026

Real Time Sementiment Analysis Pipeline • Github link: [thanhtan2210/Semtiment Analysis](#)

- Architected a real-time sentiment analysis pipeline using Apache Kafka and Spark Streaming to process high-frequency social media data.
- Implemented Natural Language Processing (NLP) models to classify user emotions, achieving a low-latency response time for live data insights.
- Designed a scalable storage strategy using NoSQL databases to handle unstructured data and support rapid analytical queries.
- Tech Stack: Python, Apache Kafka, Spark, Docker, MongoDB.

10/2025–Present

End-to-End Sales Data Pipeline • Github link: [thanhtan2210/Sales_Dashboard](#)

- Developed an automated ELT pipeline to ingest sales data from multiple sources into Google BigQuery, ensuring data consistency and integrity.
- Optimized data models using Star Schema principles, reducing query costs and improving dashboard loading speed by 40%.
- Automated data orchestration and scheduling to provide stakeholders with near real-time business performance metrics.

- Tech Stack: SQL, Google BigQuery, dbt, Python, Looker/PowerBI.

▼ Certification

- HackerRank Software Engineer certificate (link: [HackerRank](#))
- TOEIC READING & LISTENING 590 (30/07/2023) (link: [cee291145d468f18d657.jpg - Google Drive](#))
